

XD Type Multi-Cyclone Dust Collector

XD type multi-cyclone dust collector is a kind of high-efficiency dust collector. The dust removal efficiency can reach above 95%. The dust body resistance is lower than 900Pa. The existing boiler induced draft fan can ensure the normal operation of the boiler. XD type multi-cyclone dust collector has good load adaptability. At 70% load, the dust removal efficiency is above 94%.

The cyclone in the XD type multi cyclone dust collector is made of cast iron or ceramic and its thickness is more than 6mm, so it has good wear resistance. It is the ideal equipment for industrial boiler flue gas dust removal and other dust treatment.
